Lab 3: Component Modelling & Architectural Pattern Selection

Name: Arayana Jain (5B)

SRN: PES2UG24CS079

JUSTIFICATION :

Two concise reasons for choosing Microservices

1. Independent scaling: Data collection and processing services can be scaled separately as the number of patients and incoming vital readings increases.
2. Fault isolation: If the Monitoring UI or one service fails, other services such as vital-data collection and alert generation can continue operating independently.
